

The Safe Solution

ClariVein® involves no invasive surgery or risk of heat damage, is painless and does not use multiple injection of local anaesthetic. It is safe and gentle and over in a few minutes.

Conventional treatments for varicose veins - ranging from the traditional surgical stripping to the thermal techniques such as laser and radio-frequency ablation may carry significant risks (up to 25%, according to research*) of nerve and skin damage with significant bruising.

For Lovely Legs

ClariVein®
The next generation
in Varicose Vein Treatment

This safe, quick, 15 minute "in rooms" procedure is the solution to Varicose Veins

- "Walk-in, Walk-out" procedure
- No pain during or after treatment
- No Tumescant Anaesthetic needles
- Immediate return to normal routine
- Excellent clinical and cosmetic results

ClariVein®

The New Way to quick and pain-free treatment of Varicose Veins.

Varicose Veins affect many people of all ages and can be both unsightly and painful. If left untreated they may be potentially dangerous for your health and well-being.

This latest treatment option is quick, safe and pain free, and can be done in a 15 minute "walk-in, walk-out" procedure in the Doctor's rooms without the need for local anaesthetic. After the ClariVein® treatment, you can resume your normal activities immediately.

Most commonly used treatments for varicose veins can be quite painful, sometimes cause bruising and may have up to a 25% chance of nerve or skin damage*. ClariVein® eliminates the disadvantages of the old-fashioned treatments, such as surgical stripping, laser and radio-frequency procedures.

Journal of Vascular Surgery - October 2008 - 48(4):947-52

ClariVein® Advantages

ClariVein® has many advantages over existing old fashioned techniques:

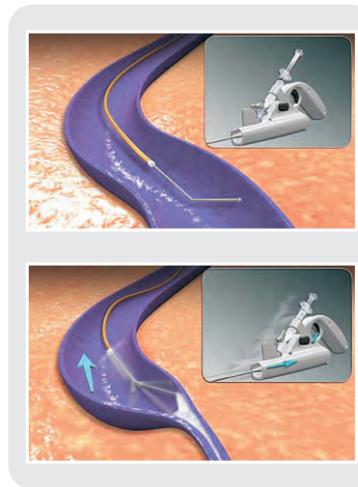

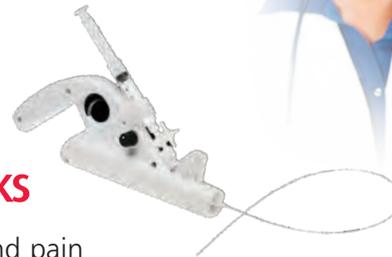

- Less expensive than surgery*, laser and radio frequency ablation
- No requirement for multiple needle sticks
- No risk of nerve or skin damage, or numbness from heat damage to surrounding tissue
- Zero or negligible bruising
- High patient comfort level throughout the procedure and afterwards
- No high internal leg pressure
- An immediate return to normal daily activities.

* Before rebate

How it Works

This quick, safe and pain free ClariVein® procedure involves the insertion of a fine rotating catheter into the vein under ultrasound guidance.

As the catheter is withdrawn, a chemical is released which safely and painlessly closes the varicose vein, leaving no bruising or nerve/skin damage. The patient can then return to their normal daily activities.

What are Varicose veins?

Varicose veins occur in up to one in three men and women and are caused by faulty valves in the surface leg veins. As the veins malfunction, blood flows the wrong way pooling in the vein, causing it to have a painful and unsightly twisting and bulging appearance.

If left untreated, varicose veins can lead to leg ulcers and subsequent infection. Although often hereditary, and most common in older and obese people, pregnant women and people who stand for long periods, this condition can occur to virtually anyone at anytime. And while many theories exist, medical science remains unsure of any absolute cause of this very common and very painful disease.

A 15 minute "in room" procedure and you are back to your normal day

Don't let the look of Varicose veins hold you back in life, talk to your Doctor and see if ClariVein® is the solution for you.
